

CNT ROBOTICS NEWSLETTER

January 2018

Happy & Healthy New Year to All!

At the CES 2018 Conference in Las Vegas (Jan. 9-12, 2018) ROBOTIS showcased the new Bioloid Premium (see picture below for one possible configuration) but did not release any technical details or price information for it yet. This new system seems to be more integrated to smart phones than the PLAY 700.

ROBOTIS also announced a new collaboration agreement with LG Electronics (http://www.robotis.com/model/board.php?bo_table=notice&wr_id=183337). So, my guess is that we can expect to have Embedded AI in ROBOTIS robots to collaborate with your LG appliances at home soon.

Michael Overstreet designed a new shell for the OP-3 (<http://mike-ibioloid.blogspot.com/2018/01/how-i-3d-printed-out-robotis-op3-covers.html>).

For my part, I am about 70% done in my new textbook for the DREAM system (<https://www.cntrobotics.com/dreambook>). You can see a few enhancements made to existing DREAM robots with this YouTube video (<https://youtu.be/8NxViBFM5no>).

Later this month, I'll restart teaching the Weekend Robotics programs at UGA (<https://www.georgiacenter.uga.edu/youth/robotics-programs>).
